## **Java Software Engineer - Level II**

**Location:**

St. Petersburg, FL

**Pay Rate:**

Negotiable

**Area Code:**

727

**Travel Required:**

None

**Tax Term:**

Fulltime/Permanent

**Telecommute:**

No

**Skills:**

We are looking for an experienced Java "Superstar" who would be interested in working on a team in the Tampa Bay area, focused on delivering high quality software, using agile development practices. The candidate will be primarily developing Java web applications using J2EE (JEE) technology.

**Description: Duties may include but are not limited to:**

- Participate as part of an Agile/Scrum development team
- Work with product owners to help refine software requirements based on Marketing and Product requirements
- Create and document software designs to meet requirements
- Implement design, document, unit test, and fix defects
- Responsibilities include use of process tools for configuration management and defect tracking
- Work in collaboration with Product Management, Quality Assurance, Documentation writers and Technical
- Support to ensure the quality of the software products and components
- Mentor junior level software engineers
- Throughout the process, the engineer will work as a liaison with other team members, the product owner, marketing, and quality assurance.

**Requirements:**

- Very strong Java skills...a cut above the rest!
- Bachelor's degree in Information or Computer Science
- 2+ years of software development experience
- Java web application development
- A proven track record in building enterprise-class software products and solutions
- Experience developing multi-tier enterprise products using JEE technologies with RDBMS interaction (Java, JSP, Servlet, EJB, JNDI, JDBC)
- Basic understanding of PL/SQL, and relational database design
- Communication and written skills and the ability to integrate into a close teamwork environment

**Skills which are not required, but are highly desired:**

- JBoss application server development
- SIP, VoIP, VXML, other voice protocols and standards
- Web Services frameworks
- Java Server Faces w/ AJAX
- C#, C++
- UML and various modeling tools
